

# Movie Ticket Booking Systems

To start the application(Windows OS):

1. Extract the zip file at your desired location. You will find ***Ticket\_Booking\_System.exe*** and other relevant files.
2. Now, there are two ways you can run this application:
  - a. By manually installing dependencies:
    - i. After extracting the zip, go to command prompt in windows at this folder and run following commands sequentially.
      1. npm install
      2. npm start
  - b. By running executable directly:
    - i. In this step, you just have to double click on ***Ticket\_Booking\_System.exe*** and you will be able to run the application.
3. Once you run the application it will show 3 menus i.e., 1. Book Tickets 2. Show Total Sales 3. Cancel respectively.
4. If you select first option i.e., **Book Tickets** it will ask you to enter show number. Please enter **show number** among 1, 2 and 3. After entering valid show number, it will ask you to **enter seats**. You have to enter space separated seat numbers e.g. **(b2 b3 b4)**.
5. After entering valid show number and seats, it will show you the status accordingly whether tickets have been booked or not.
6. You can repetitively select multiple tickets from multiple shows. It will give you status of ticket booking after every booking.
7. Now, if you select 2<sup>nd</sup> option i.e., **Show Total Sales** it will show you the total sales for the theatre with calculation of service tax, swachh bharat cess and krishi kalyan cess.
8. When you select 3<sup>rd</sup> option i.e., **Cancel**, the system will terminate.
